How to use the 2020 Virtual Reality Viewer

**Loading a compatible 360° panorama on your phone**

To load a compatible 360° panorama on your phone, you have three options:

1. Use a QR code reader app to read the QR code on your 2020 Virtual Reality Viewer. We recommend QR Reader by TapMedia. This will automatically load the correct panorama webpage into your phone’s browser.

2. Enter [www.2020spaces.com/pano](http://www.2020spaces.com/pano) in your phone’s browser and select a 2020 Design panorama marked with this icon: 📈

3. Open one of your own compatible panoramas* created in 2020 Design in your phone’s browser.

*Note: Only panoramas created with 2020 Design v11.4 and later versions are compatible with your viewer. Visit 2020.net to download the latest version of 2020 Design.

**Entering virtual reality mode**

This is how the panorama looks when initially loaded into your phone’s browser.

This is how the panorama looks when it is ready to be viewed in the viewer.

![View in VR](image2)

Tap the arrow button to view more panoramas.

Tap the VR icon to get the proper split view shown above.
Assembling the 2020 Virtual Reality Viewer

1. This is how the viewer looks when you receive it.

2. Fold up the black section with the lenses and secure it into the two grooves.

3. On the opposite side, fold the bridge into place.

4. Load a compatible 360° panorama on your phone and place the phone in the viewer with the screen facing the lenses.

5. Fold the flap over your phone to keep it in place.
